

WATER IS LIFE!

The Stampriet Transboundary Aquifer, the ONLY year-round fresh water source in the dry south-eastern part of Namibia, faces potential pollution threats from a proposed high risk uranium mining project using in situ leaching. **High risks of radioactive and toxic heavy metal contamination in our drinking water, necessitate urgent action to protect our livelihoods, wildlife, economic activities and the health of our people. Your immediate assistance is critical to stop this looming crisis.**

91%

of our groundwater is used for irrigation and town supply

3.3

million hectares is the area covered by EPL's

80 000

and more people will be impacted

Help **us** protect our groundwater.
